The Project

Our idea and the progress we've made

Letter from the Trustees

Dear Friends,

Last October, the Global Returns Project set out with two primary goals.

First, we wanted to identify and support today's best not-for-profit climate solutions. We knew that not-for-profits play an important and underappreciated role in tackling the Climate Crisis. As the world awaits innovative technologies in areas like energy storage and transport, not-for-profits stand ready right now with solutions that reduce carbon emissions or

And second, we wanted to **empower the financial system to fund these solutions at scale.** If financial institutions could make supporting not-for-profits normal and easy for their clients, they could generate billions for today's best climate initiatives.

protect natural carbon sinks.

In just under six months, your support has allowed this campaign to make amazing progress towards achieving those goals.

Having assessed **over 130** climate initiatives using our own methodology, we've assembled an impressive portfolio of charity partners: Ashden, ClientEarth, Global Canopy, Trillion Trees, Rainforest Trust UK and—as of March 2021—Whale and Dolphin Conservation.

Since November 2019, our supporters have raised **over £120,000** for our partners. And that funding has already made a remarkable

difference, from storing over 600,000 metric tonnes of CO2e through rainforest preservation to supporting the successful closure of Europe's single largest greenhouse gas emitter.

And your support has set a powerful plan in motion. **600** people have joined the Global Returns Project, adding their voices to the growing call for serious change in the way we fund climate solutions. And that call is being answered. The Global Returns Project is already in conversation with **over 20** financial institutions about making climate solutions normal and easy for their clients.

In this, our first impact report, we begin by elaborating on the goals of the Global Returns Project, the research we've conducted on our effectiveness and our top line impact figures. Next, we introduce our charity partners and describe each of their individual achievements in the past year. Finally, we cover the Global Returns Project's outreach efforts—our events, press coverage and publications—before explaining how you can get further involved in our work and thanking our supporters.

We are incredibly grateful to everyone who has made our progress thus far possible. If we can build this kind of momentum in just six months, we're more convinced than ever before: real change in the way we fund climate solutions is within reach.

Trustees of the Global Returns Project 12 May 2021

Joanna Bacan

Our idea

At the **Global Returns Project**, we want to make it **normal** and **easy** for individuals to take meaningful climate action. That is why we have researched and identified a portfolio of the most effective climate charities for individuals to support. And it is why we work with financial institutions to provide their clients with a simple mechanism to make regular climate commitments.

THE NEED AND "WHY NOW"?

We are living in a crucial decade for our planet. To limit global warming to around 1.5°C above pre-industrial levels, we must halve global emissions by 2030 and then reduce them to net zero by 2050.

The speed at which we act over this decade matters almost as much as the scale.

The good news is that the climate solutions we need are available today. They are cost-effective and ready to be implemented at scale. These solutions are **not-for-profit climate initiatives.**

OUR PLAN

The Global Returns Project has a simple plan with the potential to raise \$10 billion every year for the most effective not-for-profit climate solutions.

We help financial institutions offer their clients a "tick-the-box" option to

REINVEST IN EARTH:

commit a small percentage (we propose 0.25%) of their savings and investments each year to our carefully selected portfolio of climate change charities.

WHO IS INVOLVED?

NOT-FOR-PROFITS

Currently, less than 2% of global philanthropic giving goes to climate mitigation efforts. Yet nature-based-solutions, if properly funded, could sequester 11 billion tonnes of carbon dioxide per year by 2030. Our plan helps fill the funding gap for these effective and scalable not-for-profit climate initiatives.

INDIVIDUALS

As individuals, we face a number of behavioural barriers when looking to take climate action. Yet donating to climate not-for-profits is the most effective lifestyle choice we can make for the planet. Our solution removes friction in the donation process by making it normal and easy to fund these not-for-profits.

FINANCIAL INSTITUTIONS

Financial institutions want to tackle the Climate Crisis. And the industry is already changing, as evidenced by the rapid rise of sustainable investing. Our solution redefines "returns" in the context of the Climate Crisis, helping financial institutions both satisfy client demand and safeguard our planetary boundaries.

100x more effective

HOW EFFECTIVE IS REINVESTING IN EARTH COMPARED TO OTHER CLIMATE LIFESTYLE CHOICES?

Recently, a variety of articles, apps and websites have emerged which offer individuals lists of actions they can take to reduce their "carbon footprint" and tackle the Climate Crisis. However, many of these lists fail to mention donating to climate change charities as a way for individuals to make a difference.

Despite this, we know that not-for-profit climate initiatives are highly cost-effective, and that our charity partners are among the best climate solutions globally.

For this reason, we decided to assess the effectiveness of several commonly quoted climate lifestyle choices in relation to a £600 Reinvestment in the Global Returns Project.

Our findings indicate that Reinvesting in Earth is by far the most effective lifestyle choice an individual can make in relation to the Climate Crisis. This research does not suggest that other climate lifestyle choices are futile—quite the opposite. In this crucial decade, any actions we can take as individuals to reduce emissions are extremely important.

What this research *does suggest*, though, is that committing to the best not-for-profit climate solutions is a highly effective climate action for individuals—and one that until now has been largely overlooked.

Reinvesting in Earth could be as much as

100x

more effective than any other individual climate lifestyle choice.

more effective than switching to a plant-based diet

more effective than switching to an electric car

more effective than avoiding a return economy transatlantic flight

more effective than switching to green energy

more effective than living car-free for a year

Your Impact

MEANINGFUL CLIMATE ACTION

By Reinvesting in Earth, you:

- show financial institutions that client demand exists for further and faster action when it comes to climate change;
- recognise that future financial returns depend on our ability to protect the planet today;
- have selected from a diverse portfolio of climate solutions, providing global returns for both people and planet.

Private individuals globally hold **\$140 trillion** in financial assets.

If just 3% of those individuals *Reinvest in Earth*, committing **0.25%** of their savings and investments each year to tackle climate change...

... we could raise and spend **\$10** billion every year by 2030 for the most effective climate solutions.

The Portfolio

Today's best not-for-profit climate solutions

Our portfolio

ClientEarth[®]

Global Canopy

Ashden finds, funds and supports organizations delivering new, affordable and sustainable energy solutions.

countries in which they are active

ClientEarth is a team of lawyers ensuring existing environmental laws are respected and helping governments develop effective environmental policies.

countries in which they are active

paid to 8 organisations from Ashden's 'Fair Cooling Fund' 100+

local councils have used
Ashden's Climate
Action toolkits

ZERO CARBON SCHOOLS AND SUSTAINABLE CITIES

In November 2020, Ashden launched the **Let's Go Zero campaign:** a national campaign uniting UK schools to go zero carbon by 2030. By joining the campaign, schools are making a public commitment to take action to reduce their emissions individually, whilst also collectively urging national governments to support this endeavour through finance, policy and regulation.

So far, **over 200 schools** have signed up for the campaign, which will be showcased at COP26 later this year.

Ashden's Cities team have also had a strong impact over the last year, providing local councils with the tools they need to address the climate emergency. Following the success of their Climate Action Co-Benefits Toolkit, Ashden has developed **31 Climate Actions for Councils**, informing climate emergency action planning by providing the likely carbon savings, approximate costs and main co-benefits of various regional-scale actions.

Both the toolkit and the 31 Actions are being used by **more than 100 councils** across the UK today.

THE ASHDEN AWARDS

On 2nd July 2020, Ashden ran another successful Awards cycle, awarding **11 new** winners across three UK and eight international categories. To reflect changes and evolving challenges in the sustainable energy sector, they introduced three new award categories: Natural Climate Solutions, Humanitarian Energy and Energy and Livelihoods.

Ashden gave £190,000 to their award winners and, in addition, provided around £55,000 in business support.

Ashden will continue to work closely with each of these winners well into the future, helping them scale up their operations.

E-cargo bikes won the "Clean Air in UK Towns and Cities Award"

FUTURE PLANS

Over the next six months, Ashden will be planning their 2021 Awards ceremony, which will take place in November. They are bidding to hold the Awards ceremony as part of the **COP26 programme** in Glasgow, which would allow them to reach key international audiences.

Their Sustainable Towns and Cities programme team will continue to host events to introduce Ashden award winners to local authorities through their network of City Regions sustainability leads and regional learning hubs. This activity is all with the aim of increasing the speed at which climate change programmes are delivered nationwide.

"It has been a delight to be a beneficiary of the Global Returns Project. This initiative is not only directing much needed funding to charities like Ashden but is also helping shift the paradigm on investment into climate!"

Edward Dean – Director of Business Development, Ashden.

DRAX POWER SCRAPS PLANS TO BUILD EUROPE'S LARGEST GAS-FIRED PLANT

ClientEarth's opposition to Drax's plans for a **3.6GW** gas mega plant in North Yorkshire began in 2018. ClientEarth reported then that the plant would be responsible for as much as **75%** of the emissions budget for the entire UK power sector, once fully operational.

They argued that if these plans were to receive the green light, they would fundamentally undermine the government's net zero targets and its broader ambitions to show genuine leadership on climate change. Despite their legal challenge, the Court of Appeal upheld the government's approval of the plant.

However, in February 2021, after mounting legal and environmental pressure, Drax Power performed a dramatic U-turn and communicated its decision to abandon the project.

Following the announcement, Drax's CEO publicly stated: "The future of gas power generation fuel is getting shorter all the time." This is a significant win for the UK's short-term emissions.

PUBLICATION OF 'PARIS-ALIGNED' PRINCIPLES FOR COMPANIES AND INVESTORS

In the last six months, ClientEarth has conducted two reviews of how FTSE companies conduct their climate change reporting.

Their first review found that **only around 50%** of FTSE 100 companies disclose some form of net zero targets in their annual reporting.

In their second review, they discovered that **more than 90%** of the UK's 250 largest firms

make no reference to climate-related factors in their financial accounts. Additionally, many of the firms who are setting targets also fall short in their real-world actions to phase out fossil fuels.

In response, ClientEarth published a set of key principles for companies and investors to follow in order to decarbonise and achieve net zero targets. By means of a principles-based approach with non-negotiable "red lines," their report details how companies can, and must, take bold action to realise green obligations.

FUTURE PLANS

ClientEarth has ambitious plans for the remainder of 2021. This includes a bold anti-greenwashing campaign that builds on the success of their BP complaint to advocate for **tighter regulations on fossil fuel advertising.**

The campaign will highlight the false and misleading narratives spread by polluting corporations, as well as exposing their true actions and the subsequent costs for the planet.

Proposed fossil fuel advertising with a tobacco-style health warning about the risks of climate change

"Support from the Global Returns Project is providing our Climate team with the foundation to make tangible differences around the world. We are holding governments and corporations to account, ensuring they deliver on their environmental obligations and helping to divert financial flows away from fossil fuel projects and investments."

members of the TFND working group, which Global Canopy helped bring together

60%

of global trade in deforestation risk commodities are being tracked by Global Canopy's Trase tool 81%

of North American financial institutions have no deforestation policy for their high-risk commodities

TARGETING ILLEGAL DEFORESTATION IN THE BRAZILIAN SOY SUPPLY CHAIN

In June 2020, Global Canopy's Trase programme, working with local organisations in Brazil, published a report exposing the links between soy imports and illegal deforestation in Brazil.

Using Trase data, the study estimated that **over 80%** of the soy grown on farms where illegal deforestation took place in Mato Grosso was exported in 2018. Approximately **20%** of the European Union's total imports from Mato Grosso and **21%** of China's imports were likely to have come from farms where illegal deforestation had occurred.

One particular finding was key to triggering action from the private sector. Around 80% of the total illegal deforestation linked to soy production took place on just 400 farms, which represent **just 2%** of the total number of soy farms in the state.

The findings of the study were presented to key business forums, including the European Feed Manufacturers' Federation (FEFAC). And in October 2020, the study was cited in **an open letter to the UK Government** signed by global food companies including McDonald's, Unilever and Tesco, calling for more ambition on the Government's due diligence consultation process in addressing global deforestation.

ENCORE SUCCESS

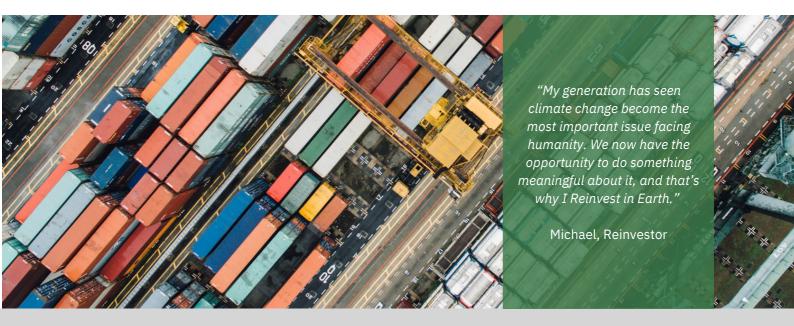

Global Canopy's **ENCORE** tool (Exploring Natural Capital Opportunities Risks and Exposure) has been used by both the Dutch Central Bank and the Swiss reinsurance giant SwissRe in the past year to assess their exposure to natural capital risks.

In what represents a landmark report for central banks, the Dutch bank identified that 36% of assets held by Dutch investors had high or very high dependence on nature.

ENCORE continues to develop, and a new biodiversity module is in the process of being launched.

Niki Mardas, Executive Director of Global Canopy, was interviewed on BBC World News in December 2020, after Global Canopy and INPE data showed a 12 year high in Brazilian deforestation.

FUTURE PLANS

The news that the Norwegian Government intends to support Global Canopy's **Aligned Accountability project** means that the not-for-profit is now at the centre of global efforts to improve, standardise and mainstream deforestation and biodiversity metrics for the finance sector.

Over the next six months Global Canopy is looking to leverage momentum from the TNFD to engage a Finance Sector Working Group, with the long-term goal of building out a common database for deforestation and biodiversity reporting.

"The approach that the Global Returns Project is taking by seeking to leverage the power of wealth and markets to finance positive action is very closely aligned with the vision of Global Canopy, which is of transparent and accountable markets that contribute to a more sustainable and equitable global economy."

CREATING A CLIMATE REFUGE IN THE PHILIPPINES

The southern part of the island of Palawan in the Philippines is covered in lush forests that store **204 metric tonnes of carbon dioxide equivalents per acre**. This landscape, however, sits directly above one of the world's largest nickel deposits, making it a constant target for commercial mining.

In February 2021, Rainforest Trust established a **19,924-acre protected area** in this region of Palawan after reaching their fundraising target for the project. This new protected area not only stores over **4 million metric tonnes** of carbon dioxide equivalents, but also safeguards Atabay Lake: a sacred watershed for the local indigenous Tagbanua tribe.

This project is typical of Rainforest Trust's successful conservation model, which uses the expertise of its in-country NGO partners and the knowledge of the local indigenous communities for the benefit of people and the planet.

The project was funded, in part, by a grant made from the Global Returns Project in January 2021. This funding was quadrupled by two committed supporters of Rainforest Trust, meaning that (including the match-funding) the grant protected 2,960 acres of rainforest habitat and safely stored over 600,000 metric tonnes of carbon dioxide equivalents.

STRATEGIC LAND PURCHASE IN COLOMBIA

In 2006, Rainforest Trust helped establish the El Dorado Nature Reserve. Located on Colombia's Caribbean shores, it is widely regarded as the planet's single most important site for biodiversity, with the region's wet tropical forests storing significant amounts of carbon as well.

However, due to the expansion of the agricultural frontier in the region, the rainforest and animal species residing in it have been under serious threat in recent years. For this reason, in 2020, Rainforest Trust decided to acquire key property rights and expand the nature reserve by a further **12,179 acres**.

We were pleased to be able to provide a grant for this project, which was match-funded by Rainforest Trust's SAVES Challenge, meaning that (including the match funding) the grant protected **331 acres** of threatened rainforest habitat, safely storing over **54,000 metric** tonnes of carbon dioxide equivalents.

Credit James Lewis and Rainforest Trust (Magombera, Tanzania)

FUTURE PLANS

Rainforest Trust recently announced its Strategic Plan for the next five years. Their plans include a major commitment to protect a total of **125 million acres**, including 7% of all currently unprotected high-integrity tropical and subtropical forests, permanently locking up **15 billion tons of carbon dioxide equivalents** over the period.

Underpinning this major new commitment to respond to the Climate Crisis, Rainforest Trust UK launched the **Rainforest Trust Climate Action Fund** on Earth Day 2021. This fund will support the most "carbon cost-effective" projects, identified by the Rainforest Trust team.

"We are proud to be a partner of the Global Returns Project, and we applaud the organisation's innovative approach to combatting the climate emergency. We truly value the financial support offered by the Global Returns Project, which allows Rainforest Trust UK to do what we do best – protect threatened old-growth rainforests for the benefit of species, communities and the climate."

\$242k

provided to the Herencia Colombia initiative to help protect the Chiribiquete National Park 10,000

hectares of forest under better protection in Peru thanks to WWF training of regional government officials

PROTECTING COLOMBIA'S THREATENED RAINFOREST

Trillion Trees has a strong presence in the Colombian Amazon, working with private sector partners and local NGOs to deliver innovative solutions that not only protect rainforests, but also benefit indigenous populations.

Working with the regional environmental authority, Corpoamazonia, Trillion Trees has helped unlock financing held by Colombia's Agrarian Bank for conservation and restoration activities. There have been nearly 400 applicants to the partnership so far, seeking financing largely for community ecotourism projects.

Trillion Trees has also provided assistance in Colombia at the buffer zone around Chiribiquete National Park. This area is being deforested at an alarming rate due to land grabbing and cattle ranching.

As a result, in the municipality of Calamar, WWF-Colombia is working with a group of local community leaders (known as "environmental promoters") with the aim of stopping this deforestation, protecting and restoring remaining forest and helping to provide alternative sustainable livelihoods to local and indigenous people.

BUILDING CAPACITY TO LEVERAGE FUNDING IN PERU

Over the last year, Trillion Trees has invested in the training of regional government officials (led by WWF-Peru) in the Peruvian Amazon.

Training programmes in the Amazonian regions of Madre de Dios and Ucayali have focused on improving the technical capacity of regional government officials in drafting and submitting bids for government funding, helping these regions mobilise previously untapped restoration funds.

To date, this training has resulted in the Peruvian Government accepting two proposals for forest protection and approving investment for better forest landscape management over an initial 10,000 ha area in the country.

©Luis Barreto, WWF (for Buffer zone of Chiribiquete National Park in Colombian Amazon)

FUTURE PLANS

Over the next five years, Trillion Trees plans plans to bring **35 million hectares** of forest into improved protection and support quality restoration across **20 million hectares** in partner landscapes.

These restoration efforts include the Trillion Trees **ReForest Fund** which helps plant trees, recover biodiversity and support communities in landscapes where Trillion Trees partners are operating.

By working in these landscapes where partners have a long term presence, the initiative is able to build trusting relationships with local and indigenous communities and work with them to develop sustainable solutions for all stakeholders.

"Our thanks to the innovative Global Returns Project ... for its support to Trillion Trees. Working together, we can restore our home."

John Lotspeich, Executive Director, Trillion Trees

could be responsible for
sequestering with a return to prewhaling numbers

Whale and Dolphin Conservation (WDC) is the leading global charity dedicated to the protection of whales and dolphins. They have over thirty years' experience in lobbying governments and working with the fishing industry to stop whaling, create healthy seas, prevent deaths in nets and end captivity.

WDC became a Global Returns Project charity partner in March 2021. Detailed impact information will therefore be provided during the next report cycle in six months' time.

FUTURE PLANS

Over the next six months, Whale and Dolphin Conservation's major focus will be their 'Green Whale' work stream. This is a long-term project that aims to develop financing mechanisms for the protection of whales that are tied to the ecosystem services they provide.

This work will involve compiling a robust programme of research that strengthens appreciation of whales' role as a nature-based solution to the Climate Crisis. Meanwhile, WDC will also be identifying any Marine Protected Areas that could be used to test their sustainable finance modelling and its impact.

"We are incredibly excited to be working with the Global Returns Project. Whales play a significant role in maintaining a healthy ocean and planet. Our partnership will help us take action to protect these amazing creatures and positively help address the Climate Crisis - for their sake and for ours."

How to get involved

1. JOIN THE PROJECT

Joining the Global Returns Project is the easiest way to support this campaign. When you sign up for free as a supporter, we:

- 1. Plant one tree
- 2. Send you our fortnightly newsletter
- 3. Send you an exclusive report on climate change

Join at: www.globalreturnsproject.earth

2. REINVEST IN EARTH

Reinvesting in Earth is the most powerful way to support this campaign. To Reinvest in Earth, you commit a small percentage (we propose 0.25%) of your savings and investments every year to funding the most effective not-for-profit climate solutions.

Learn more and Reinvest in Earth at: www.globalreturnsproject.earth

What's in the Global Returns Project Newsletter?

Climate change is complicated. Every two weeks, we try to make things a little simpler, writing about a facet of the Climate Crisis and curating the best articles, videos and podcasts on the topic.

Real change is within reach. Are you ready to Reinvest?

- How you calculate 0.25% of your savings and investments is entirely up to you.
- You can count any climate donations you already make towards fulfilling your annual 0.25%.
- 100% of your funds go to your selected charities.
- Use the calculator on our Reinvest in Earth web page to help you calculate your 0.25%.

3. FOLLOW US ON SOCIAL MEDIA

4. BECOME A FRIEND OF THE GLOBAL RETURNS PROJECT

Because we send 100% of donations to our charity partners, we rely on the generosity of charitable trusts, foundations and individual donors to fund our core costs.

You can become a **Friend of the Global Returns Project** by providing core funding or pro bono services to support our work. To learn more, contact us at: info@globalreturnsproject.earth

Thank you

The last year has not been without its challenges and like so many others, the Global Returns Project team have had to get used to a new way of working.

One constant throughout the year though, has been the generous support of the **Friends of the Global Returns Project** who we would like to personally thank for their funding or pro bono services below.

We would also like all of those who have "Reinvested in Earth" or Joined the Project. Your support has been, and will continue to be integral to our aim of raising \$10 billion per year by 2030 for the most effective climate solutions.

Clockwise from top left: Joanna Bacon (Non-Executive Trustee), Jasper Judd (Executive Trustee), Camilla Swiderska (Executive Trustee), Olly Tapper (Development Manager), Jack Chellman (Strategic Communications Manager), Yan Swiderski (Executive Trustee)
